Exercise 7.2 (Small 3/2 points)

With Java:

Create a multi-document-interface, where a user can edit multiple texts at the same time (using JTextArea or JEditorPane).

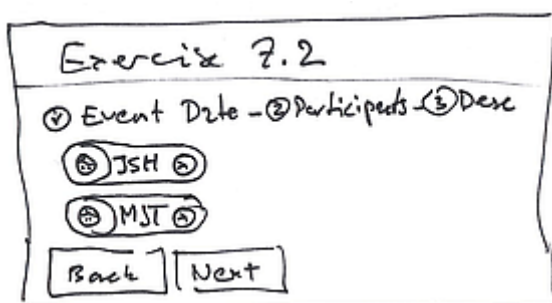

Enable the default drag-n-drop in the text editors using `setDragEnabled(true)`;

The application must have a File menu with New and Close options, which open a new `JInternalFrame` and close the active frame respectively.

With React:

Create an application, where a user can create event. An event must have date, participants and description text. Use stepper in the application so that the different information is given in different steps. The participant selection can be from a set of given people using Chips. Provide also a view where the created events can be seen.
